

# MANN-FILTER

## Product Information

No 114  
28/02/2017

### Why does the C 16 134/1 look different now?

The MANN-FILTER air filter C 16 134/1 differs to its prior execution in visual appearance – in consequence of a modification to the production process.

#### What is different?

The modification to the production process has resulted some changes of the MANN-FILTER C 16 134/1, including the reduced diameter of the filter bellow and the diameter of the end plate. The respective dimensions for installation in the system remain unchanged and are still equal to the dimensions of the original part.

#### Does the C 16 134/1 still fulfil the OE-quality?

The newly designed MANN-FILTER C 16 134/1 also meets the same original equipment standards in terms of separation efficiency, dust capacity and pressure loss. For this reason the filter still meets the stringent requirements of the international automotive industry.

C 16 134/1 in old execution
